

Noris digital

Reinventing the tried and tested

Tradition meets innovation

At first glance, the STAEDTLER Noris digital looks just like a normal pencil and feels like one too - but it is actually a stylus for tablets, smartphones and notebooks (*please check the [compatibility list](#)*).

Brand new possibilities

It is used on displays in the same way a traditional pencil is used on paper. Whether you're traveling, studying, in the office, drawing or at home writing down grandma's recipes - a digital pencil gives you more options.

Clever

Brilliant technology

The key component of the Noris digital is the innovative EMR lead from our partner WACOM. This technology enables the stylus to use an electromagnetic field generated by the display of the device (tablet, smartphone or notebook) and to interact with it inductively.

Easy writing

This technology allows you to place your palm on the display to make writing more comfortable, just as you would do with paper (*function depends on the app. Our recommendations can be found [here](#)*). Because of this and the ergonomic shape of the Noris digital, you can write without your hand getting tired. You can highlight text and make notes in PDFs, e.g., on lecture notes, and then share them without having to print out several pages. This doesn't just save paper, it also saves time.

Creative

Feels just like a pencil

Like our pencils and coloured pencils, the stylus is made of the wood-based material WOPEX. Thanks to the 4,096 pressure levels, you can intuitively vary the line width of a stroke, just like with a pencil. Simply press harder or more softly with the stylus (*this function depends on the app you are using*). Even the precise 0.7 mm writing point was modelled on a classic pencil.

Natural inspiration

The entire look and feel of the stylus is based on an analogue pencil. This means that this is the ideal tool for digital artists. Let your creativity run wild and create sketches, detailed drawings or your next artwork.

Independent

No empty batteries or annoying cables

Thanks to its advanced technology, the stylus does not need a battery and so never needs to be charged. In addition, it does not need to be paired with your device or require a driver to be installed.

Comfortable use

The Noris digital can be used any time and anywhere. Whether you're at home, at school, in the office or even on the road - just unpack it and get started.

Effective

Familiar handling

The writing angle of the Noris digital is very flexible (between 40 and 140°). It immediately feels familiar, meaning you can use your device naturally and giving you full control over your display inputs.

Effective presentation

Anyone who picks up the Noris digital can use it intuitively. Use it to make your presentations and talks more creative and effective - even live in meetings.

Advanced

Appreciably simple

Noris digital jumbo is the enhanced version of our classic Noris digital. The analogue pencil design has been maintained and supplemented with a soft digital eraser, allowing you to delete text and drawings on the display and to correct errors simply by turning the stylus around. (please check the [compatibility list](#) and selection of [recommended apps](#))

Unique feel

The Noris digital has an ergonomic, triangular and comfortable thick shape. The eraser at the end of the stylus is so soft that using it on displays feels familiar - like using an eraser on a sheet of paper.

Digital learning

Thanks to its thicker shape, it is particularly suitable for children's hands and is therefore ideal for their first writing and drawing exercises on digital devices. Kids will simply not want to put it down.

Quick & easy corrections

As well as allowing you to write precisely, the Noris digital also allows you to quickly correct mistakes by turning the stylus around (please check the [compatibility list](#) and selection of [recommended apps](#)).

Create quick notes

Compatibility

The Noris digital is compatible with a variety of smartphones, tablets and notebooks with EMR technology. Please check that your device has EMR.

Our models

Noris digital

The classic! The familiar hexagonal shape, for more control when making handwritten entries on displays.

Noris digital jumbo

Enhanced! The comfortable thick triangular shape is particularly suitable for children's hands, is also comfortable for adults and allows you to write without getting tired.
